

Introducing PG-2R.

Studio-grade regulator/power conditioner with surge protection

Regulate to protect your investments

The PG-2R ensures that no voltage fluctuations from your power source pass through to your connected, expensive studio hardware. It maintains a steady output voltage of 120v within a tight $\pm 2v$ tolerance, meaning all your connected equipment will be reliably, safely running on exactly the voltage it was intended to use—enhancing its reliability and prolonging its life.

The PG-2R's Regulation Stage display gives you an at-a-glance look into how hard it's working—it constantly monitors the input voltage, and corrects power fluctuations, brownouts, or other serious voltage issues.

High-end filtering.

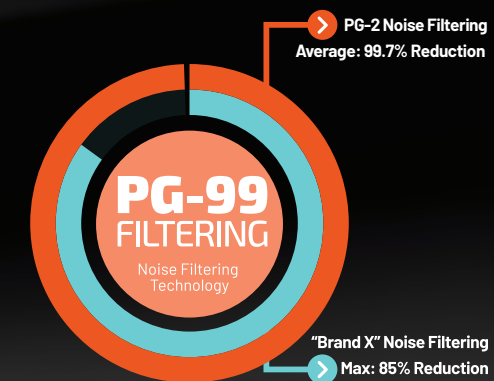

Your gear deserves the best power, and we took great care in making sure the PG-2R delivers just that, thanks to PG-99 Filtering Technology. The PG-2R is built using premium Panasonic and Wima capacitors, due to their superior execution in eliminating high frequency noise that robs equipment of its peak performance. In testing, this has provided **an average of 99.7% of noise filtering**, as opposed to the typical average of 85% found in other power conditioners at the same price point. Combine that superior power filtration with an impressive power absorption rating of 2775 joules, and your gear isn't just getting quality power, but it's protected from the most unsafe of scenarios that can happen!

The PG-2R features a bank of 12 switched, filtered and surge protected outlets on the back panel, divided into four groups

(Digital Audio x2, Analog Audio, and High Current). The Analog Audio and High Current outlets are time delayed, always ensuring that your speakers and power amplifiers are the last to turn on, and the first to turn off — this prevents the dreaded “pop” that can occur if speakers receive power at the same time as your sound sources. The PG-2R also features 2 filtered convenience outlets, and two USB chargers (*that can charge most laptops*) on the front panel, as well as XLR lamp connectors on both the front and back panels.

Professional features for professional power.

It takes more than a few rack-mounted outlets to inspire true confidence in your power conditioner, and that's where the PG-2R delivers! The PG-2R features a suite of status and alert capabilities: a voltage meter and amperage meter for real-time analysis, LED status for grounding/polarity/noise filtering/abnormal voltage/surge protection, and an audio alarm for unsafe voltage. Even in the worst power scenarios, the PG-2R has your gear's safety in mind.

Regulate.

Introducing the new PG-2R.

Protect your investments! The **PG-2R** ensures that no voltage fluctuations from your power source get to your connected, expensive studio hardware. It maintains a steady output voltage of 120v within a tight $\pm 2v$ tolerance, meaning all connected equipment will be consistently and safely running on exactly on the voltage it was intended to use—enhancing reliability and prolonging life of your precious studio hardware. An impressive power absorption rating of 2775 joules protects your

studio from any serious power spikes.

The PG-2R's PG-99 Filtering Technology provides **an average of 99.7% of noise filtering**, reducing hum and pops in your audio signals. You get power sequencing for your amps and monitors, plus two USB chargers (that can charge most laptops) on the front panel and two XLR lamp connectors.
