Confidence
inspiring power.

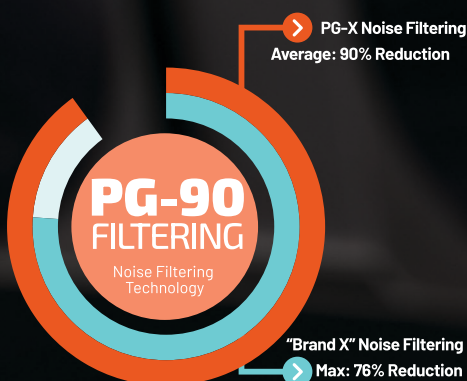

Our power conditioners and regulators don't only give your equipment investment the best power it can get — they also deliver peace of mind as they protect your studio from dangerous power surges. We poured all of our mod know-how into the PG-family of power conditioners for enhanced power filtering, noise rejection, and more, helping you to coax every ounce of high performance from your equipment.

After creating the original PG-1, Black Lion Audio knew that plenty of professionals on a smaller budget felt left out, as some features might not be as important as an economy price-point. The PG-X Type F was built with this in mind,

while still providing best-of-class power conditioning!

High-end Filtering

Your gear deserves the best power, and we took great care in making sure the PG-X Type F delivers just that — thanks to PG-90 Filtering Technology. In testing, this has provided an average of 90% of noise filtering, as opposed to the typical average of 76% found in other power conditioners at the same price point.

Professional Power

The PG-X Type F features a bank of six switched, filtered and surge protected outlets on the back panel. On the front panel, the PG-X Type F sports one unswitched convenience outlet and a USB port for device charging.

It takes more than a few rack-mounted outlets to inspire true confidence in your power conditioner, and that's where the PG-X Type F delivers: best-of-class power filtering!
